

IT GOVERNANCE: The Time is Now!

10 September 2015,
Ballroom 1, Sheraton Grande Sukhumvit

Overview

Currently, launch of new information technology and technological changes through internet systems are reshaping business landscape and style of living; and therefore, the "cyber world" of information technology (IT) systems have become essential and core competitiveness for almost all type of business.

Given that IT systems is at the heart of all business operations, oversight and governance of such systems is as essential as other potential business risks. As such, Board of Directors need to fully understand as well as be concerned with systems to control the security and safety of IT systems in use. Board must also monitor and be mindful about cyber security, and protect against potential cyber threats to the organization.
